

JERRY POND
T5 R7, Penobscot Co.
U. S. G. S. Shin Pond, Me.

Fishes

Brook trout (squaretail)	Minnows (Cont'd)
Hornpout (bullhead)	Blacknose dace
White sucker	Common shiner
Minnows	Threespine stickleback
Golden shiner	Yellowbelly sunfish
Creek chub	

Physical Characteristics

Area - 272 acres	Temperatures
	Surface - 67° F.
Maximum depth - 13 feet	12 feet - 67° F.

Jerry Pond has similar water temperatures at all depths. Trout seek cool spring areas and stream tributaries when pond temperatures become too warm.

The pond supports a fairly good population of brook trout despite the abundance of suckers, minnows, sunfish, and hornpout that compete with trout for food and space. These fish are undoubtedly reducing the trout population to some extent.

Natural spawning of trout appears adequate to maintain the fishery.
